STARTING AND MAINTAINING AN ACADEMIC YEAR UNDERGRADUATE RESEARCH PROGRAM

www.maa.org/columns/resources/issue%204.html

Developing a meaningful research program for undergraduate students can be tricky, and some faculty members may be looking for a resource to help them with such an endeavor. Recently, a joint panel of experts convened by the Mathematical Association of America (MAA) met up to discuss how to effectively mentor undergraduate research. The panelists included Sarah Spence Adams, Rebecca Garcia, Rick Gillman, Darren Narayan, and Daniel Schaal, and the summary of their discussion can be found here. They were asked to talk about five different topics, including purposes for doing undergraduate research and the characteristics of good undergraduate research problems. After reading the short summaries of each of the five topics, visitors can view each panelist's original presentation or presentation notes.

BASIC BUSINESS STATISTICS

wps.prenhall.com/bp_berenson_bbs_11/

As business is one of the most popular undergraduate majors in the United States, it stands to reason that there are a number of specialized textbooks and supporting instructional materials that are dedicated to various topics within this field. This particular website is designed to serve as the companion to a basic business statistic textbook published by Prentice Hall, and it contains quizzes, overviews, and other materials that will be helpful to both students of the discipline and educators. The materials here are divided into nineteen chapters that cover topics like sampling, data presentation, linear regression, and decision making. Visitors can also take advantage of the search engine here, which is located at the top right-hand corner of each page.

To find this resource and more high-quality online resources in math and science visit Scout's sister site - AMSER, the Applied Math and Science Educational Repository at <http://amser.org>.
